

ECOBYTE - Corporate API (v1)

=====

Base URL: <https://freedata.in>

Generated: 04 Sep 2026 11:02 UTC

Authentication: X-API-Token: <your-token> (or Authorization: Bearer)

Every call is restricted to the IP addresses registered on your account.

Account passwords and PINs are never accepted.

CORE (V1)

The modern surface for new integrations. JSON in, JSON out, machine-readable string errors alongside a numeric code support can trace.

GET /api/corp/v1/services

What you can call today

GET /api/corp/v1/balance

Your wallet balance

GET /api/corp/v1/transactions

Your transaction history, all services

RECHARGE (V1)

Mobile and DTH recharge. Money endpoints are POST; status is GET.

POST /api/corp/v1/recharge

Place a recharge

GET /api/corp/v1/recharge/{ref}

Status by our order id

GET /api/corp/v1/recharge

Status by your own reference

GET /api/corp/v1/operators

Operator catalog with codes and limits

GET /api/corp/v1/recharge/plans

Tariff plans for an operator/circle

GET /api/corp/v1/recharge/circle

Operator and circle lookup for a number

BILL PAYMENTS BBPS (V1)

Browse the biller directory, render the biller's input form from its `customer_params` schema, fetch the live bill, then pay. Billers whose `fetch_requirement` is MANDATORY must be fetched before payment.

GET `/api/corp/v1/bbps/categories`
Biller categories with counts

GET `/api/corp/v1/bbps/billers`
Paginated biller directory

GET `/api/corp/v1/bbps/billers/{id}`
One biller WITH its input-form schema

GET `/api/corp/v1/bbps/quote`
Price preview no money, no vendor call

POST `/api/corp/v1/bbps/fetch`
Fetch the live bill (no money)

POST `/api/corp/v1/bbps/pay`
Pay the bill

GET `/api/corp/v1/bbps/{ref}`
Status of one of your bill payments
